Geometry and Physics

BEYOND BOOKS HUB

An invention is a unique or novel device, method, composition or process. It may be an improvement upon a machine or product or a new process for creating an object or a result. An invention that achieves a completely unique function or result may be a radical breakthrough. Some

inventions can be patented. A Patent legally protects the intellectual property rights of the inventor and legally recognizes that a claimed invention is actually an invention. The rules and requirements for patenting an invention vary from country to country, and the process of obtaining a patent is often expensive.

The New Age

Entrepreneurs Prabhat Prakashan

So many companies and brands out there in the market, it will be

impossible to stand out without a great name. Just imagine, there are already more than 150,000 companies operating in a small country like Singapore. How will your brand stand out if it doesn't have a great name? Finding a great name is also no longer easy because of the proliferation of companies and brands in our society. Chances are, the name you think of has already been registered and trademarked by someone else. So, what do you do? The 10 Rules Of Naming

will show you how to create a powerful brand name in a simple, straightforward and jargon-free manner. Besides explaining the 10 rules of naming in detail, the book also covers the pitfalls of naming to avoid, binding everything together through vivid examples of how companies with great names went about creating those names.

Decisions of the Comptroller General of the United States

Penguin

In the present book, How

to Win Friends and Influence People, Dale Carnegie says, "You can make someone want to do what you want them to do by seeing the situation from the other person's point of view and arousing in the other person an eager want." You learn how to make people like you, win people over to your way of thinking, and change people without causing offense or arousing resentment. For instance, "let the other person feel that the idea is his or hers" and "talk about your own mistakes

before criticizing the other person." This book is all about building relationships. With good relationships, personal and business successes are easy and swift to achieve. Twelve Ways to Win People to Your Way of Thinking 1. The only way to get the best of an argument is to avoid it. 2. Show respect for the other person's opinions. Never say "You're wrong." 3. If you're wrong, admit it quickly and emphatically. 4. Begin in a friendly way. 5. Start with questions to which the other person

will answer yes. 6. Let the other person do a great deal of the talking. 7. Let the other person feel the idea is his or hers. 8. Try honestly to see things from the other person's point of view. 9. Be sympathetic with the other person's ideas and desires. 10. Appeal to the nobler motives. 11. Dramatize your ideas. 12. Throw down a challenge.

Asian Architect and Contractor Jones & Bartlett Learning
Author John Mittendorf has completely rewritten

his best-selling book, *Truck Company Operations*, a must-have for all firefighters who are assigned to the truck and who have responsibilities for the truck on the fireground. The new second edition covers the many aspects, tasks, and functions of a truck company, and contains new and expanded information related to search, reading a building, reading smoke, the Ten Commandments of truck company operations, operating truck apparatus, and

more--all from a truck company perspective. *Cult of Analytics: Driving Online Marketing Strategies Using Web Analytics* Plunkett Research, Ltd.
You're considering the case of a maintenance worker injured while repairing an elevator, or an elderly woman hurt on a department store escalator while doing some weekend shopping with her grandchildren. An initial search of the literature has turned up almost nothing useful. Your instinct tells you the

cases are good, but to evaluate them properly, you need this new addition to our litigation series. The key questions are: what caused the accident, and what were the contributory factors? Some accidents have an element of "in the wrong place at the wrong time" about them, while others have an element of disregard for the equipment involved. Sadly, others fall into the category of sheer negligence or incompetence. This book will help you determine

the difference. This new third edition revises and adds new content, with the most up-to-date information to help you succeed in these cases. The authors have investigated numerous elevator and escalator accidents. Their expertise will guide you as you make your decision to take or reject the cases, and their experience will give you the basic understanding of the issues you need to understand to proceed with confidence. Topics Include: * Codes,

regulations and related subjects--for the U.S., with consideration of Canada and the U.K.* Accident statistics and selected incidents * The elements of typical escalator accidents * Reviewing and understanding maintenance documents * Presuit investigation: should a suit be instituted? * Legal theories and negligence * A glossary and a sample expert report * Pleadings--excerpt of a typical complaint * Discovery--sample interrogatories, request for production of

documents and corporate designee notices * Expert opinion: the applicability of Daubert, Khumo and Frye

This book is devoted to the customization design of product/service system (PSS), making use of a systematic design process and a number of methods, especially Industrial Customer Activity Cycle Analysis, Service Quality Function Deployment, Service Function and Attribute Analysis, Modified Service

Blueprint, Multi-Objective Optimization and Multi-Criteria Recommendation Method. The book is especially valuable in manipulating the problems of PSS requirements analysis, design conflict, design reuse and proactively response to customer. The methods in the book facilitate modular design of customized solutions and enhance PSS design efficiency. Presenting case studies, this book helps researchers and practitioners to understand the

customization process and methods in the early development of PSS. *Case Studies in Japanese Management* PennWell Books

Multi-volume major reference work bringing together histories of companies that are a leading influence in a particular industry or geographic location. For students, job candidates, business executives, historians and investors.

Up, Down, Across World Scientific

Each century has its own unique approach toward

addressing the problem of high density and the 21st century is no exception. As cities try to cope with rapid population growth - adding 2.5 billion dwellers by 2050 - and grapple with destructive sprawl, politicians, planners and architects have become increasingly interested in the vertical city paradigm. Unfortunately, cities all over the world are grossly unprepared for integrating tall buildings, as these buildings may aggravate multidimensional sustainability challenges resulting in a “vertical

sprawl” that could have worse consequences than “horizontal” sprawl. By using extensive data and numerous illustrations this book provides a comprehensive guide to the successful and sustainable integration of tall buildings into cities. A new crop of skyscrapers that employ passive design strategies, green technologies, energy-saving systems and innovative renewable energy offers significant architectural improvements. At the urban scale, the book

argues that planners must integrate tall buildings with efficient mass transit, walkable neighbourhoods, cycling networks, vibrant mixed-use activities, iconic transit stations, attractive plazas, well-landscaped streets, spacious parks and engaging public art. Particularly, it proposes the Tall Building and Transit Oriented Development (TB-TOD) model as one of the sustainable options for large cities going forward. Building on the work of leaders in the fields of

ecological and sustainable design, this book will open readers' eyes to a wider range of possibilities for utilizing green, resilient, smart, and sustainable features in architecture and urban planning projects. The 20 chapters offer comprehensive reading for all those interested in the planning, design, and construction of sustainable cities.

DALE CARNEGIE & NAPOLEON HILL BEST SELLER COMBO Elevator World Inc

China is the largest emerging market in the

world, yet Western MNCs have invested significantly less there than their Asian MNC counterparts. Luo systematically compares Western and Asian investment strategies and their performance in the China market and finds lessons that Westerners must heed. He also reviews and analyzes new economic and regulatory environments (e.g., WTO) in China and their potential effect on all foreign investors. Clearly written and readable by anyone reasonably

familiar with matters of world trade and investment, the book illustrates its points with case studies drawn from Luo's own research and is difficult to find elsewhere. The result is a needed contribution to the literature on international investment in the China market, primarily for upper level executives and scholars specializing in emerging markets and international business.

Lifts and Escalators Fire Engineering Books
Based on empirical research of over 240

interviews the authors present new concepts and trends in global R&D management. Case studies from 18 best-practice companies give detailed answers to the most pressing challenges for mastering international innovation. "...a real tour de force, probably destined to become a standard in this field for some time to come." Professor Jeff Huang, Harvard University "A feast of delights... deserves a very wide readership." Phil Gamlen, ICI Technology - Science

and Technology Policy Strategy
10 Rules to Create A Great Brand Name
 Random House India
 In 1971, Francis L. Brannigan created *Building Construction for the Fire Service*, a groundbreaking resource offering the most comprehensive knowledge of building construction available to fire fighters. With his dedication to fire fighter safety and saving lives, the legacy of Frank Brannigan continues with the sixth edition of

Brannigan's *Building Construction for the Fire Service*. The Sixth Edition meets and exceeds the National Fire Academy's Fire and Emergency Services Higher Education (FESHE) course objectives and outcomes for the Associate's Core-Level course called *Building Construction for Fire Protection (C0275)*. Brannigan's *Building Construction for the Fire Service*, Sixth Edition is an integral resource for fire officers, instructors, those studying for promotion, individuals taking civil

service examinations, fire science students, and both current and prospective fire fighters. It is part of an integrated teaching and learning system that combines dynamic features and content to support instructors and to help prepare students for their career in firefighting. This new edition features: Chapter 7 Non-Fire Building Systems (new) describes several categories of non-fire systems in buildings, including electrical systems, plumbing

systems, conveyances, refrigeration systems, and Ventilation (HVAC) systems, in addition to the hazards the systems pose for fire fighters. New or expanded content on: Aluminum-clad polyethylene panels Scaffolding Cranes and their use Modular construction using stacked shipping containers Light-weight wood-frame construction Fire escapes and stair design Cross-laminated timber and heavy timber construction Methods of protecting steel against

fire New “green” materials and methods such as hempcrete and biofilters Structural wall framing systems with insulated studs Air-supported structures for sporting events Massive single-structure lightweight wood frame apartment buildings Firefighting recommendations in lightweight wood frame residential buildings Building construction and its relationship to flow path Historical perspective on fire resistance testing and its

shortcomings Roofing material tests Safety issues of post-fire investigation of significantly damaged/collapsed buildings Scenario-Based Learning. Case Studies are found at the

beginning and end of each chapter to encourage and foster critical-thinking skills. Tactical Considerations. This feature offers suggestions for firefighting, safety concerns, and related additional material for

application on the fireground. Wrap-Up. Chapter Summaries, Key Terms, Challenging Questions, and Suggesting Readings promote comprehension and mastery of course objectives and outcomes.
