"While global trade negotiations remain stalled, two tracks of trade negotiations in the Asia-Pacific--the proposed Trans-Pacific Partnership (TPP) agreement and a parallel Asian track--could generate momentum for renewed liberalization and provide pathways to region-wide free trade. We estimate that world income would rise by \$295 billion per year on the TPP track, by \$766 billion if both tracks are successful, and by \$1.9 trillion if the tracks ultimately combine to yield region-wide free trade. The tracks are competitive initially but their strategic implications appear to be constructive: they generate incentives for enlargement and mutual progress and, over time, for region-wide consolidation. The "21st century" template of the TPP would be especially productive because it is likely to offer opportunities for the leading sectors of both emerging-market and advanced economies. An ambitious TPP template would generate greater gains from integration than less demanding alternatives, but it will be harder to sell to China and other key regional partners as the TPP evolves toward wider agreements. The crucial importance of Asia-Pacific integration argues for an early conclusion of the TPP negotiations, but without jeopardizing the prospects for region-wide or even global agreements based on it in the future"--Provided by publisher.

The balancing of competing interests and goals will have momentous consequences for Japan—and the United States—in their quest for economic growth, social harmony, and international clout. Japan and the United States face difficult choices in charting their paths ahead as trading nations. Tokyo has long aimed for greater decisiveness, which would allow it to move away from a fragmented policymaking system favoring the status quo in order to enable meaningful internal reforms and acquire a larger voice in trade negotiations. And Washington confronts an uphill battle in rebuilding a fraying domestic consensus in favor of internationalism essential to sustain its leadership role as a champion of free trade. In *Dilemmas of a Trading Nation*, Mireya Solís describes how accomplishing these tasks will require the skillful navigation of vexing tradeoffs that emerge from pursuing desirable, but to some extent contradictory goals: economic competitiveness, social legitimacy, and political viability. Trade policy has catapulted front and center to the national conversations taking place in each country about their desired future direction—economic renewal, a relaunched social compact, and projected international influence. *Dilemmas of a Trading Nation* underscores the global consequences of these defining trade dilemmas for Japan and the United States: decisiveness, reform, internationalism. At stake is the ability of these leading economies to upgrade international economic rules and create incentives for emerging economies to converge toward these higher standards. At play is the reaffirmation of a rules-based international order that has been a source of postwar stability, the deepening of a bilateral alliance at the core of America's diplomacy in Asia, and the ability to reassure friends and rivals of the staying power of the United States. In the execution of trade policy today, we are witnessing an international leadership test dominated by domestic governance dilemmas.

Asia is experiencing major changes in its security relations. This book brings together respected experts to assess both the theoretical and empirical dimensions of the Asian security debate. Building on the latest research on Asia's regional security politics, it focuses on the 'regional-global nexus' as a way to understand the dynamics of Asian security politics and its intersection with global security. Contributors to the volume offer diverse but complementary perspectives on which issues and factors are most important in explaining how security politics in Asia can be interpreted at both the regional and global levels of analysis. Issues addressed include power balancing and alliances, governance and democracy, maritime and energy security, the relationship between economics and security, 'human security', terrorism, nuclear non-proliferation, climate change and pandemics. This work will serve as a standard reference on the evolution of key issues in Asian security.

The success of western business in the Asia Pacific region depends to a large degree on the capacity of western firms to learn new approaches to doing business in the region and to adopt new styles of management practice, business operations, and strategy. Business in Asia Pacific seeks to address this need by providing a useful insight into the international business opportunities and a guide to strategic management, decision-making, and business operations in the region in the wakeof the economic crisis of 1997. *El Kahal* brings together an account of the Asia Pacific business environment with an analysis of management styles and decision-making techniques. The book begins with an analysis of the Asian economic miracle and of the crisis of the late 1990s, including a country by country review of all the region's major economies in the aftermath of the crisis. Part II then goes on to investigate the socio-cultural bases of the Asia Pacific management environment, focusing in particular on the cases of Japan, South Korea, and China. This is followed by an analysis of post-crisis strategies for companies doing business in Asia Pacific and of the most effective ways of establishing markets in the region. The book concludes with an entire section of detailed case studies illustrating the experiences of a number of major multinationals in doing business in the region, including Daewoo, Wal-Mart, Nike, Land Rover, and Samsung. Using a variety of learning aids, including case materials, end of chapter review questions, and group project materials, *Business in Asia Pacific* helps the student to take a more active approach to studying this popular and important topic and as such will be invaluable reading for all students of business and management with an interest in this fast-growing region of the world economy.

Reconciliation in the Asia-Pacific Routledge

History has left many scars in the Asia-Pacific. Injuries inflicted generations ago are still fresh in the collective memories of the peoples of the region, hobbling efforts to repair relationships between old adversaries. But recently the spirit of reconciliation seems to have acquired new life. From Korea to Japan to China, longtime enemies are trading apologies and looking ahead. In this remarkably timely volume, Yoichi Funabashi, one of Japan's most influential journalists, and seven authors from throughout the Asia-Pacific shine the spotlight on the prospects for reconciliation in the region. Looking at instances of inter-ethnic as well as international strife, this book lays out the background to each case, analyzes the impact of unresolved and sometimes unacknowledged grievances, and weighs the prospects for overcoming the burden of history. Not all the cases inspire optimism, at least in the short term, for bitter memories have burrowed deep into society and are intertwined with issues of political power and ethnic identity. But in some parts of the region, palpable progress toward reconciliation is being made. In his conclusion, Funabashi identifies the key steps that governments and publics must take if they are to come to terms with the past.

The economic crisis of 1997 called East Asia's economic miracle into question and generated widespread criticism of the region's developmental models. However, the crisis did little to alter the growing economic integration of American, Japanese and Chinese firms who have created cross-border production networks. This book addresses the changing nature of high-tech industries in Asia, particularly in the electronics sector, where such networks are increasingly designed to foster and to exploit the region's highly heterogenous technology, skills and know-how.

Southeast Asia contains four urban conglomerates of the sort that this study characterizes as Mega-Urban Regions à " Jakarta, Manila, Bangkok and Ho Chi Minh. These locations are examined in this book, along with Taipei and Shanghai. Because the administrative boundaries of the cities at the core of these zones do not include the entire urban area, the significance of the broader urban community has largely escaped scholarly attention. The authors base their analysis on actual agglomeration size rather than administrative boundaries, and draw on unpublished census data to study the dynamics of these massive urban zones, considering area and population size as well as social and demographic patterns of change in core, inner and outer zones. They conclude that these mega-urban regions continue to increase their share of national populations, and zones immediately beyond the official metropolitan boundaries are where the most dramatic changes are occurring.

This volume examines the economic, political, social and environmental challenges facing rural communities in the Asia-Pacific region, as global issues intersect with local contexts. Such challenges, from climatic change and volcanic eruption to population growth and violent civil unrest, have stimulated local resilience amongst communities and led to evolving regional institutions and environment management practices, changing social relationships and producing new forms of stratification. Bringing together case studies from across mainland Southeast Asia and the Island Pacific, an expert team of international contributors reveal how communities at the periphery take charge of their lives, champion the virtues of their own local systems of production and consumption, and engage in the complexities of new structures of development that demand a response to the vacillations of global politics, economy and society. Inherent in this is the recognition that 'development' as we have come to know it is far from over. Each chapter emphasizes the growing recognition that ecological and environmental issues are key to any understanding and analysis of structures of sustainable development. Providing diverse multidisciplinary theoretical and empirical perspectives, *Environment, Development and Change in Rural Asia-Pacific* makes an important contribution to the revitalization of development studies and as such will be essential reading for scholars in the field, as well as those with an interest in Asia-Pacific studies, economic geography and political economy.

Soon after the American Revolution, certain of the founders began to recognize the strategic significance of Asia and the Pacific and the vast material and cultural resources at stake there. Over the coming generations, the United States continued to ask how best to expand trade with the region and whether to partner with China, at the center of the continent, or Japan, looking toward the Pacific. Where should the United States draw its defensive line, and how should it export democratic principles? In a history that spans the eighteenth century to the present, Michael J. Green follows the development of U.S. strategic thinking toward East Asia, identifying recurring themes in American statecraft that reflect the nation's political philosophy and material realities. Drawing on archives, interviews, and his own experience in the Pentagon and White House, Green finds one overarching concern driving U.S. policy toward East Asia: a fear that a rival power might use the Pacific to isolate and threaten the United States and prevent the ocean from becoming a conduit for the westward free flow of trade, values, and forward defense. By *More Than Providence* works through these problems from the perspective of history's major strategists and statesmen, from Thomas Jefferson to Alfred Thayer Mahan and Henry Kissinger. It records the fate of their ideas as they collided with the realities of the Far East and adds clarity to America's stakes in the region, especially when compared with those of Europe and the Middle East.
