Edwin Land and Polaroid, the company he created in the 1930s, have spawned many bold scientific innovations over the years. Most of them led quickly to unique commercial products. Best known for revolutionary instant photography systems, Land and Polaroid also achieved miracles in light-polarizing technology that is embedded in many of today's consumer products. During World War II, Polaroid manufactured and created a large array of products for the U.S. military; later, Land's top-secret cold war initiatives led to crucial intelligence breakthroughs. Polaroid features images of signature innovations, scientists, and photographers who pioneered the use of Polaroid film.

Numerous environmental processes affect the development and stability of playa (lakebed) surfaces. Of special significance are hydrologic processes that control the amount and flow of both surface and ground water, and climatic variations which in turn influence the hydrology. This report, in six parts, examines some aspects of the playa surface environment. Chapter 1 is an introduction. Chapter 2 describes microrelief changes that developed at Harper Playa, California, following flooding of the playa in 1965-66. Chapter 3 documents a subsurface hydrologic investigation at Rogers Playa, California.

The investigation revealed that the piezometric surface has lowered into sand layers beneath the surface, and it may explain why giant desiccation fissures have formed in the surface clays. Chapter 4 describes an investigation of seven Australian playas and suggests that Australia did not undergo a pluvial period like that of the western United States. Chapter 5 describes three kavirs (playas) in northern Iran and indicates that former lakes did exist there, but not to the same extent as in the western United States. Chapter 6 examines the possibilities of observing playa surface changes from satellites, using the present remote sensor technology. It also states that Gemini color photography and high resolution vidicon (TV) imagery are

currently useful. (Author)

Biochemistry of Cancer BFI Publishing
Restriction Endonucleases and Methylases, the fifth volume in the series, Gene Amplification and Analysis, covers important new research advances in molecular biology brought about by the use of restriction endonucleases and methylases. Contributions by authorities in the field focus on research studies that examine both the structure and catalytic properties of this important group of DNA enzymes. This volume also serves as a useful reference for reaction conditions and the general application of restriction endonucleases as reagents for molecular biology. Restriction Endonucleases and Methylases is invaluable reading for those who wish to better understand the restriction

enzymes utilized in various areas of research in molecular biology.

Biochemistry of Cancer focuses on cancer research, including induction, chemical composition, and growth of tumors and chemotherapy. The book first offers information on the general phenomena and taxonomy of cancer. Discussions focus on the transmissibility of tumors and experimental basis of cancer research; cancerous transformation of animal tissues in vitro; growth and the vascular reactions of tumors; and classification of animal tumors. The text also ponders on the extrinsic factors in the induction of tumors, including comparative carcinogenicity of hydrocarbons,

metabolic fate of injected hydrocarbons, dosage and response to carcinogenic hydrocarbons, and polycyclic hydrocarbons. The manuscript takes a look at the intrinsic factors in the induction of tumors. Topics include influence of sex hormones on carcinogenesis of sex and accessory sex tissues; viruses as causative agents for fowl tumors and rabbit papillomas; and possibility of relatively non-specific endogenous carcinogens. The publication also elaborates on attempts to control tumor induction and growth and the chemistry of tumors. The book is a vital reference for readers interested in the biochemistry of cancer.

The web has its own language, aesthetics, issues, and problems; yet the infrastructure and rules of web site design are still in their infancy. Here, the author discusses how Web designers should collaborate with editors and

engineers, have an acute understanding of the concept of real-time, master hypertext, know their audience, be wary of multimedia, and create sites that emphasize simplicity and clarity and that users can move through quickly.

What makes Polaroid photography stand out? Since its invention by Edwin Land in 1947, how has it crept into our common culture in the ways we witness today?

Writing in the context of the two bankruptcies of Polaroid Corporation and the decline and obsolescence of its film, Peter Buse argues that Polaroid photography is distinguished by its process. The fact that, as the "New York Times" put it, the camera does the rest, encouraged distinctive practices by the camera's users, including its most famous use: as a party camera. Polaroid

was often dismissed as a toy, but this book takes its status as a toy seriously, considering the way it opened up photographic play while simultaneously lowering its own cultural value. Drawing on unprecedented access to the archives of the Polaroid Corporation, Buse paints Polaroid as an intimate form, where the photographer, photograph, and photographed are in close proximity in time and space. This has profound implications for the photographic practices Polaroid cameras permit and encourage, such as the sexual Polaroid, evidence of which the author pulls from literature, film, and pop culture, or Polaroid as a form of play, a fun technology, an ice breaker that can make things happen. Buse also tells the story of Polaroid's response as a

company to developments in digital imaging and its ultimately doomed hard-copy wager in the face of them. Pushing further, he explores the continuities and discontinuities between Polaroid and digital snapshot practices, reflecting on what Polaroid can tell us about digital photography today. "

What does it mean to be a social being in the ordinary life-world? This clear and compelling introduction to social phenomenology examines the experiential features of the basic things comprising our life-world, namely me, you, abstract others (enemies, communities, and associations), and attributes of the lived-body (emotions, pain, and pleasure). Each of these

entities is phenomenologically described, with the aim of reducing reports of personal experiences and other primary documents to the presumed prototypical experience of the thing in question—its ideal essence. Another aim of this study is to sociologically account for how the various entities of the life-world have been accomplished, that is, how the prototypical experiences of the things in question have come to be. By showing the life-world to be our joint project rather than a fixed, unalterable coherency, this volume destabilizes our naive attitude towards the things of the world. Examples are drawn from the author's own research on issues such as violence, religion, health, and race; from classic and contemporary

anthropological research; and from the works of some of the most innovative philosophers of the twentieth century.

This study actually does phenomenology instead of merely arguing for its necessity and will appeal to both social scientists and philosophers.
