The Economic Approach to Law, Second Edition
 Routledge
 A systematic comparison of the three major economic theories, showing how they differ and why these differences matter in shaping economic theory and practice.
 Contending Economic

Theories offers a unique comparative treatment of the three main theories in economics as it is taught today: neoclassical, Keynesian, and Marxian. Each is developed and discussed in its own chapter, yet also differentiated from and compared to the other two theories. The authors identify each theory's starting point, its goals and foci, and its internal logic. They connect

their comparative theory analysis to the larger policy issues that divide the rival camps of theorists around such central issues as the role government should play in the economy and the class structure of production, stressing the different analytical, policy, and social decisions that flow from each theory's conceptualization of economics. The authors, building on their earlier

book Economics: Marxian versus Neoclassical, offer an expanded treatment of Keynesian economics and a comprehensive introduction to Marxian economics, including its class analysis of society. Beyond providing a systematic explanation of the logic and structure of standard neoclassical theory, they analyze recent extensions and developments of that theory

around such topics as market imperfections, information economics, new theories of equilibrium, and behavioral economics, considering whether these advances represent new paradigms or merely adjustments to the standard theory. They also explain why economic reasoning has varied among these three approaches throughout the twentieth century, and why this variation

continues today—as neoclassical views give way to new Keynesian approaches in the wake of the economic collapse of 2008. *Principles of Economics* Edward Elgar Publishing The second edition of an innovative undergraduate textbook in Comparative Economic Systems that goes beyond the traditional dichotomies. This second edition of an innovative undergraduate text offers an approach

to understanding different economic systems that reflects both recent transformations in the world economy and recent changes in the field of Comparative Economic Systems. The traditional way of teaching comparative economics, with its reliance on relatively simple dichotomies (private vs. state, planning vs. market) does not take into consideration

the many variants and mixtures of economic systems that exist in the real world. The Rossers' introduction in the first edition of the concept of the "new traditional economy"—the effort by a developing country to embed a modern economic system into a traditional culture, usually religious—presented a new way to look at developing economies. Their innovative

examination of Iran and its effort to develop a "revolutionary Islamic economy" as an alternative to market capitalism illustrates the use of this new tool in comparative economics. After a four-chapter theoretical and historical overview, the book focuses on fifteen country studies, organized by economic system. The chapters on advanced market capitalism examine the

economies of the United States (a chapter new to this edition) Japan, France, Sweden, and Germany. The chapters examining transition in former socialist economies discuss Russia, the former Soviet Republics, Poland, Hungary, Yugoslavia (including expanded treatment of the most successful transition economy, that of Slovenia), and China. The chapters in the final

section of the book discuss "alternative paths" taken by the developing economies of Iran, India (its complex mix of socialism, capitalism, and tradition is examined in a chapter new to this edition), Mexico, and South and North Korea. The book concludes with a look at future trends that will continue to transform the world economy.
