International examples and photographs are included as important learning aids in understanding the effects of earthquakes on structures. **Tunnelling and Tunnel Mechanics** Asian Development Bank Pumping Station Design, Second Edition shows how to apply the fundamentals of various disciplines and subjects to produce a well-

integrated pumping station that will be reliable, easy to operate and maintain, and free from design mistakes. In a field where inappropriate design can be extremely costly for any of the foregoing reasons, there is simply no excuse for not taking expert advice from this book. The content of this second edition has been thoroughly reviewed and approved by many qualified experts. The depth of

experience and expertise of each contributor makes the second edition of Pumping Station Design an essential addition to the bookshelves of anyone in the field.

Corporate social responsibility (CSR) has become an increasingly heated topic since the 1980s. But there are severe limitations with the concept of CSR and the effectiveness of CSR practices. Addressing such limitations, this volume proposes that the concept of Corporate Social

Irresponsibility (CSI) offers a better theoretical platform to avoid the vagueness, ambiguity, arbitrariness and mysticism of CSR. It challenges conventional modes of thinking, unveils the CSR mask of business practices and redirects public attention to the core issues of CSR. This collective work sets up an initial theoretical framework for the subject of CSI and examines the

fundamental reasons for irresponsibility in and beyond a corporate context. Rooted in theory and practice it seeks to understand how boundaries of CSR and CSI have been constructed in society, and explores some systemic and structural issues of CSI in practice. tube and cut-and-cover, with comparisons of their relative advantages and suitability. The broad coverage found in the Tunnel Engineering Handbook enables engineers to address such critical questions as how tunnels are planned and laid out, how the design of tunnels depends on site and ground conditions, and which types of tunnels and

construction methods are best suited to different conditions. Written by the leading engineers in the fields, this second edition features major revisions from the first, including: * Complete updating of all chapters from the first edition * Seven completely new chapters covering tunnel stabilization and lining, difficult ground, deep shafts, water conveyance tunnels, small diameter

tunnels, fire life safety, tunnel rehabilitation and tunnel construction contracting *New coverage of the modern philosophy and techniques of tunnel design and tunnel construction contracting The comprehensive coverage of the Tunnel Engineering Handbook makes it an essential resource for all practicing engineers engaged in the design of tunnels and underground

construction. In addition, the book contains a wealth of information that government administrators and planners and transportation officials will use in the planning and management of tunnels.

practical guide for the design of stormwater pump station systems associated with transportation facilities.

Guidance is provided for the planning and design of pump stations which collect, convey, and discharge stormwater flowing within and along the right-of-way of transportation systems.

Methods and procedures are given for determining cumulative inflow, system storage needs, pump configuration

and selection, discharge system size, and sump dimensions. Pump house features are identified and construction and maintenance considerations are addressed.

Additionally, considerations for retrofitting existing storm water pump stations are presented.

From 1990 to 2019, Pakistan witnessed 108 financially closed PPP projects, with a total investment of approximately \$28.4 billion. About 88% of these projects are in the energy sector, attracting more than \$24.7 billion, followed by investments in the port sector. In early 2021, Parliament approved the amendments to the 2017 PPP Law, enacting the Public Private Partnership

Authority (Amendment) Act 2021. This further strengthens the enabling legal and regulatory framework for developing and implementing PPPs, thereby promoting private sector investment in public infrastructure and related services.

This is a study of the management problems experienced by selected metropolitan

cities in South and East Asia and of the approaches adopted in resolving them.

Although the region contains many of the world's developing countries, it is not an exception to the universal trends in urbanization, which have had a massive impact on its metropolitan cities. Apart from Tokyo, the cities concerned tend to dominate the economic and political scene in their respective

countries, but for the purposes of this discussion it is not inappropriate to refer to them and the problems they face as being broadly metropolitan.

Urban geographers and planners now tend to use the term 'metropolitan' to refer to a large identifiable area of continuous urbanization consisting of several administrative jurisdictions. Demographers today often classify cities with

populations of more than one million people as metropolitan, and in common usage the term is widely employed to symbolize social, economic, and political status. All of these characteristics apply to the cities studied here.

The Glory of Sri Sri Ganesh shows the lives of the underdogs the

Lachhimsa, the Rukmanis, the Mohors and the Haroas as a contrast to the lives of their all-powerful overlords the Medinis and Ganeshes. Lachhima, whose leashed bitterness and anger of a lifetime against Medini and Ganesh is liberated at the end of the novel when Ganesh begs her to save his life, decides to save him, but on her own terms. The title of the work itself becomes a tool for subversion in

this sprawling novel which takes the reader through a multilayered narrative into the socio-economic malaise of post-independence rural India. Mahasweta Devi's corrosive humour and cryptic style are at their best as she takes on issues of agrarian land relations, inter-caste violence, so-called rural development and position of women in rural India. Considered

one of Mahasweta Devi's most important works, this novel, written in 1981, appeared shortly after her seminal Chotti Munda and His Arrow. The hope of liberation contained in Chotti Munda continues in this book. As the author says, Chotti Munda talked of the dream of the dispossessed tribals uniting in struggle with the equally marginalized low caste communities; while this

novel shows how being landless and being born low caste is almost inevitably linked in India. Mahasweta Devi is one of India's foremost writers. Her powerful fiction has won her recognition in the form of the Sahitya Akademi (1979), Jnanpith (1996) and Ramon Magsaysay (1996) awards, the title of Officier del Ordre Des Arts Et Des Lettres (2003) and the

Nonino Prize (2005) amongst several other literary honours. She was also awarded the Padmasree in 1986, for her activist work among dispossessed tribal communities. Ipsita Chanda is a translator who also teaches Comparative Literature in Jadavpur University.

Global value chains (GVCs) powered the surge of international

trade after 1990 and now account for almost half of all trade. This shift enabled an unprecedented economic convergence: poor countries grew rapidly and began to catch up with richer countries. Since the 2008 global financial crisis, however, the growth of trade has been sluggish and the expansion of GVCs has stalled. Meanwhile, serious threats have emerged to the model of

trade-led growth. New technologies could draw production closer to the consumer and reduce the demand for labor. And trade conflicts among large countries could lead to a retrenchment or a segmentation of GVCs. World Development Report 2020: Trading for Development in the Age of Global Value Chains examines whether there is still a path to development through GVCs

and trade. It concludes that technological change is, at this stage, more a boon than a curse. GVCs can continue to boost growth, create better jobs, and reduce poverty provided that developing countries implement deeper reforms to promote GVC participation; industrial countries pursue open, predictable policies; and all countries revive multilateral cooperation.

The COVID-19 outbreak in Wuhan, Hubei, saw great numbers of patients overwhelming the admission capacity of

designated infectious diseases hospitals, which in turn led to insufficient medical supplies fulfilling treatment needs. Hence, Zall Foundation proposed the construction of COVID-19 Emergency Hospitals to effectively respond to the surging number of COVID-19 cases. This involved the conversion of existing hospitals that have insufficient, or do not have

admission capacities for infectious diseases patients, into emergency hospitals that solely focus on receiving suspected and confirmed COVID-19 cases. From January 30, 2020, Zall Foundation, along with professional medical institutions, reconstructed seven existing professional medical institutions into COVID-19 Emergency Hospitals in less than 10 days. In total, 4,583 wards were provided

after renovation, where 2,833 confirmed and suspected COVID-19 patients were cured. The COVID-19 Emergency Hospitals have played an important role in China's epidemic prevention and control by efficiently easing the problems of insufficient ward beds and inadequate admission capacities of infectious diseases hospitals. Based on the experience of construction and operation

of the emergency hospitals which are designed in strict adherence to relevant medical standards and regulations, this manual has been

compiled by the Zall Foundation. It aims to provide useful reference to the reconstruction of existing hospitals and practice of expanding medical resources for

all other regions around the world, to effectively contribute to pandemic control. The manual has been translated into more than 20 languages.
