This is a textbook on applied probability and statistics with computer science applications for students at the upper undergraduate level. It may also be used as a self study book for the practicing computer science professional. The successful first edition of this book proved extremely useful to students who need to use probability, statistics and queueing theory to solve problems in other fields, such as engineering, physics, operations research, and management science. The book has also been successfully used for courses in queueing theory for operations research students. This second edition includes a new chapter on regression as well as more than twice as many exercises at the end of each chapter. While the emphasis is the same as in the first edition, this new book makes more extensive use of available personal computer software, such as Minitab and Mathematica.

Geographical Weighted Regression (GWR) is a new local modelling technique for analysing spatial analysis. This technique allows local as opposed to global models of relationships to be measured and mapped. This is the first and only book on this technique, offering comprehensive coverage on this new 'hot' topic in spatial analysis. * Provides step-by-step examples of how to use the GWR model using data sets and examples on issues such as house price determinants, educational attainment levels and school performance statistics * Contains a broad discussion of and basic concepts on GWR through to ideas on statistical inference for GWR models * uniquely features accompanying author-written software that allows users to undertake sophisticated and complex forms of GWR within a user-friendly, Windows-based, front-end (see book for details).

The history of data brings together topics and themes from a variety of perspectives in history of science: histories of the material culture of information and of computing, the history of politics on individual and global scales, gender and women's history, as well as the histories of many individual disciplines, to name just a few of the areas covered by essays in this volume. But the history of data is more than just the sum of its parts. It provides an emerging new rubric for considering the impact of changes in cultures of information in the sciences in the *longue durée*, and an opportunity for historians to rethink important questions that cross many of our traditional disciplinary categories.

After introducing the software, the book moves straight into UI development using the sophisticated, WYSIWYG layout editor and XML code to design and test complex interfaces for a wide variety of screen configurations. With activity design covered, the book continues to guide the reader through application logic development, exploring the latest

APIs provided by the SDK. Each topic will be demonstrated by working code samples that can be run on a device or emulator. One of Android Studio's greatest features is the large number of third-party plugins available for it, and throughout the book we will be exploring the most useful of these, along with samples and libraries that can be found on GitHub. The final module of the book deals with the final stages of development: building and distribution. The book concludes by taking the reader through the registration and publication processes required by Google. By the time you have finished the book, you will be able to build faster, smoother, and error-free Android applications, in less time and with fewer complications than you ever thought possible. This book is the first to focus on violent and/or 'abusive' behaviours in lesbian, gay, bisexual and/or transgender, non-binary gender or genderqueer people's intimate relationships. It provides fresh empirical data from a comprehensive mixed-methods study and novel theoretical insights to destabilise and queer existing narratives about intimate partner violence and abuse (IPVA). Key to the analysis, the book argues, is the extent to which Michael Johnson's landmark typology of IPVA can be used to make sense of the survey data and accounts of 'abusive' behaviours given by LGB and/or T+ participants. As well as calling for IPVA scholars to challenge heteronormativity and cisnormativity and improve IPVA measurement, this book offers guidance and a new tool to assist practitioners from a variety of relationships services with identifying victims/survivors and perpetrators in LGB and/or T+ people's relationships. It will appeal to academics and practitioners in the field of domestic violence and abuse.

With many recent advances, cancer cell culture research is more important than ever before. This timely edition of *Cancer Cell Culture: Methods and Protocols* covers the basic concepts of cancer cell biology and culture while expanding upon the recent shift in cell culture methods from the generation of new cell lines to the use of primary cells. There are methods to characterize and authenticate cell lines, to isolate and develop specific types of cancer cells, and to develop new cell line models. Functional assays are provided for the evaluation of clonogenicity, cell proliferation, apoptosis, adhesion, migration, invasion, senescence, angiogenesis, and cell cycle parameters. Other methods permit the modification of cells for transfection, drug resistance, immortalization, and transfer in vivo, the co-culture of different cell types, and the detection and treatment of contamination. In this new edition, specific emphasis is placed on safe working practice for both cells and laboratory researchers. These chapters contain the information critical to success – only by good practice and quality control will the results of cancer cell culture improve. Written in the successful *Methods in Molecular Biology*™ series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible protocols, and notes on troubleshooting and avoiding known pitfalls. Authoritative and accessible, *Cancer Cell Culture: Methods and Protocols* serves as a practical guide for scientists of all backgrounds and aims to convey the appropriate sense of fascination associated with this research field.
