What do we mean when we speak about teacher autonomy? How free are teachers to go about their work? To answer these complex questions the authors asked thousands of teachers in four national contexts: in Finland, Ireland, Germany and Sweden, what they think autonomy looks like. The resulting book examines teacher autonomy theoretically and empirically, comparing teachers' perceptions of their professional autonomy. Utilizing a mixed method approach the authors combine data from a large-scale questionnaire study, teacher interviews, lesson and meeting observations, and workshops that brought together teachers from the four participating countries. All this engagement with teachers revealed that simply increasing their professional autonomy might not lead to desired outcomes. This is because, from a teachers' point of view, increased decision-making capacity brings further complexity and risk to their work, and it may instead lead to anxiety, self-restriction, and the eventual rejection of autonomy. These surprising conclusions challenge the increasingly orthodox view that increased autonomy is a desirable end in itself. This is what the authors call the autonomy paradox.

The concluding chapters draw conclusions from a pan-European perspective and consider the future prospects for renewing older housing. Nearly three years ago, world leaders agreed to the United Nations 2030 Agenda for Sustainable Development and its 17 Sustainable Development Goals (SDGs) - the central framework for guiding development policies throughout the world. This edition of *The State of the World's Forests* is aimed at enhancing our understanding of how forests and their sustainable management contribute to achieving several of the SDGs. Time is running out for the world's forests: we need to work across sectors, bring stakeholders together, and take urgent action. *The State of the World's Forests 2018* identifies actions that can be taken to increase the contributions of forests and trees that are necessary to accelerate progress towards the SDGs. It is now critical that steps be taken to work more effectively with the private sector, and the informal forest sector must be transformed in order to bring broader economic, social and environmental benefits. Seventy years ago, when FAO completed its first assessment of the world's forest resources, the major concern was whether there would be enough timber to supply global demand; now we recognize the greater global relevance of our forests and trees. For the first time, *The State of the World's Forests 2018* provides an assessment of the contribution of forests and trees to our landscapes and livelihoods. The purpose of this publication is to provide a much wider audience with an understanding of why forests and trees matter for people, the planet and posterity.
