An Analysis of the 2008 IUCN Red List of Threatened Species Open Book Publishers Originally published in 2002, Mountain Biodiversity deals with the biological richness, function and change of mountain environments. The book was birthed from the first global conference on mountain biodiversity and was a contribution to the International Year of Mountains in 2002. The book examines biological diversity as essential for the integrity of mountain ecosystems and argues that this dependency is likely to increase as environmental climates and social conditions change. This book seeks to

examine the biological riches of all major mountain ranges, from around the world and using existing knowledge on mountain biodiversity, examines a broad range of research in diversity, including that of plants, animals, human and bacterial diversity. The book also examines climate change and mountain biodiversity as well as land use and conservation.

Covering Pakistan, the superb plates are accompanied by a succinct text

highlighting identification, voice, habitat, altitudinal range, distribution and status. The text is on facing pages to the plates, for easy reference and there are distribution maps for every species. Like previous guides covering Nepal, Bhutan, Northern India and Southern India, this guide is a perfect size for use in the field and will be an essential companion when visiting this region.

Of all the African nations, Ethiopia is most prone to misconceptions. The 1985 famine and the cracked barren earth of the Danakil Depression are not images quickly forgotten. This fully updated guide refocuses the lens to reveal an ancient country that continues to surpass all expectations: from the ancient Judaic

cultures of the fertile highlands to the colourful animist people of the South Omo Valley, from the Afro-pine moorland of the Bale Mountains National Park to the thundering Blue Nile Falls. Taking you far off the beaten track, the author presents more of this expansive beautiful land, believed to be the cradle of humankind. Bradt's Ethiopia provides the most comprehensive coverage of any English-language guidebook on the market. Not only does it include towns and villages well off the beaten track, but it goes into greater depth than its competitors, with more detail on the history, culture and sights, and more opinionated and entertaining reviews of hotels and restaurants. In addition, it features detailed information on wildlife, national parks and trekking routes found in no other book.

Ethiopia Highlights Bradt Travel Guides Encyclopedia of the World's Biomes is a unique, five volume reference that provides a global synthesis of biomes, including the latest science. All of the book's chapters follow a common thematic order that spans biodiversity importance, principal anthropogenic stressors and

trends, changing climatic conditions, and conservation strategies for maintaining biomes in an increasingly human-dominated world. This work is a one-stop shop that gives users access to up-to-date, informative articles that go deeper in content than any currently available publication. Offers students and researchers a one-stop shop for information currently only available in scattered or non-technical sources Authored and edited by top scientists in the field Concisely written to guide the reader though the topic Includes meaningful illustrations and suggests further reading for those needing more specific information

"Ultimately, we can all trace our origins back to the savannas of Africa. Robin Reid's book provides an eloquent introduction into the biology of the savannas that shaped us as humans; simultaneously, she provides an insightful and comprehensive overview of current and future threats to East African savannas and the steps that need to be taken to conserve the world we first lived in. Don't go to East Africa without first

reading this book; it will enhance your safari and empower your research." Andrew P. Dobson, author of "Conservation and Biodiversity"
""Savannas of Our Birth" provides a balanced, scientific, and accessible examination of the current state of East African savannas and the relationships among the wildlife and people who live there. Reid examines how savannas came to be and what alternative futures may be possible by trying to chart a middle ground in contentious debates about conservation and local rights." J. Terrence McCabe, author of "Cattle Bring Us to Our Enemies: Turkana Ecology, History, and Raiding in a Disequilibrium System"
"Reid's research focusing on pastoralists has reminded me that wildlife and domestic livestock co-existed to their mutual benefit for the last 2000 years. With reopened eyes, I've even seen it for myself in the case of the Masai and the savanna wildlife I study. There is an extraordinary wealth of information in this book." Richard D. This book examines environmental sustainability and inclusive economic growth, providing in-depth analysis of foreign direct investment (FDI) in large-scale agriculture in Ethiopia. In most African states, arable land and other natural resources play a pivotal role for economic growth and development. Ethiopia is one of those countries where agriculture is the backbone of the economy. This sector has also been an attraction for FDI in Sub-Saharan Africa since the global food and financial crisis of 2007 and 2008. This book uses six foreign investments in large-scale agriculture as case studies to examine current Ethiopian policies, the patterns of investment they promote, how these impact on land-based resources and communities' wellbeing. Presenting analyses of the economic, social and political realities of foreign direct investment in the local context, *Foreign Direct Investment in Large-Scale Agriculture in Africa* discusses how the fundamental principles of pro-poor and environmentally sustainable investments intersect with the government's ambition to advance Ethiopia's development agenda. This book will be of interest to

scholars and students of African economics and sustainable development, African policy makers, intergovernmental organisations as well as multilateral and bilateral development partners.

From their largely descriptive beginnings about a half century ago, studies on the ecology of small mammals have mushroomed in number, scope, content and complexity. Yet strangely, or perhaps not so strangely if one considers the extent and complexity of ecological interactions, the main problems for which the early workers sought answers still defy complete analysis, and basic hypotheses remain untested if not even untestable. The same holds true for so many branches of animal ecology that it seems to be the complexity of the concepts that frustrates efforts rather than the subject species. Like all branches of science, small mammal ecology has been subject to a series of fashionable approaches, one following another as technology penetrates previously impregnable regions. Doubtless the future development of our science will be punctuated by wave

upon wave of new endeavour in whole fields that are perhaps even yet unidentified. Answers to the complex questions which ecologists ask do not come easily. Increasingly though, they arise in direct proportion to the efforts expended upon their elucidation. Many studies have achieved such a high level of elegance, in terms of manpower and apparatus, that there is a feeling that questions asked when such resources are unavailable are not worth asking. Nothing could be further from the truth. Many a complex model has failed fully to explain the phenomenon for which it was constructed because of a lack of basic field data on the species' natural history.

[Identification, Propagation, and Management for Agricultural and Pastoral Communities](#) IUCN Although most antelope species still exist

in large numbers in sub-Saharan Africa (some in hundreds of thousands), up to three-quarters of the species are in decline. Threats to their survival arise from the rapid growth of human and livestock populations, with consequent degradation and destruction of natural habitats, and excessive offtake by meat hunters. In addition, some parts of Africa are now almost completely devoid of large wild animals because of uncontrolled slaughter during recent civil wars. This report presents the information currently held by the IUCN/SSC Antelope Specialist Group on the conservation status of each antelope species (and selected subspecies) in sub-Saharan Africa. Key areas have been identified for the conservation of representative antelope communities. While external donors make the greatest contributions to the conservation of antelopes, greater recognition of wildlife conservation in national and regional development plans is often a critically important requirement.

Wildlife in a Changing World presents an analysis of the 2008 IUCN Red List of Threatened Species. Beginning with an explanation of the IUCN Red List as a key conservation tool, it goes on to discuss the state of the world's species and provides the latest information on the patterns of species facing extinction in some of the most important ecosystems in the world, highlighting the reasons behind their declining status. Areas of focus in the report include: freshwater biodiversity, the status of the world's marine species, species susceptibility to climate change impacts, the Mediterranean biodiversity hot spot, and broadening the coverage of biodiversity assessments.

Ethiopia is facing environmental and poverty challenges, and urgently needs effective management of its environmental resources. Much of the Ethiopian landscape has been significantly altered and reshaped by centuries of human activities, and three-quarters of the rural population is living on degraded land. Over the past two decades the country has seen rapid economic and population growth and unparalleled land use change. This book explores the challenges of sustaining the resource base while fuelling the economy and providing for a growing population that is greatly dependent on natural resources for income and livelihoods. Adopting a political ecology perspective, this book comprehensively examines human impacts on the

environment in Ethiopia, defining the environment both in terms of the quantity and quality of renewable and non-renewable natural resources. With high levels of economic production and consumption also come unintended side effects: waste discharges, emissions of pollutants, and industrial effluents. These pollutants can degrade the quality of water, air, land, and forests as well as harm the health of people, animals, and other living organisms if untreated or disposed of improperly. This book demonstrates how the relationship between society and environment is inherently and delicately interwoven, providing an account of Ethiopia's current environment and natural resource base and future considerations for environmentally sustainable development.

While the world taps its feet, Ethiopia breakdances with its shoulders. This is an uplifting, inspirational country which confounds expectations. It's no featureless desert but a land of majestic landscapes surrounding a vast, fertile plateau. The rock-hewn churches in its medieval

capital, Lalibela, are regarded by many as the eighth wonder of the world. Its people are welcoming, proud and besotted by their own culture and history. Bradt's Ethiopia is the most thorough guide available to this country rich in culture, history and dramatic scenery, and has been highly praised by both travel press and readers. This fourth edition of the anthrax guidelines encompasses a systematic review of the extensive new scientific literature and relevant publications up to end 2007 including all the new information that emerged in the 3-4 years after the anthrax letter events. This updated edition provides information on the disease and

its importance, its etiology and ecology, and offers guidance on the detection, diagnostic, epidemiology, disinfection and decontamination, treatment and prophylaxis procedures, as well as control and surveillance processes for anthrax in humans and animals. With two rounds of a rigorous peer-review process, it is a relevant source of information for the management of anthrax in humans and animals.
