Like lots of college grads, Daniel Seddiqui was having a hard time finding a job. But despite more than forty rejections, he knew opportunities had to exist. So he set out on an extraordinary quest: fifty jobs in fifty states in fifty weeks. And not just any jobs—he chose professions that reflected the culture and economy of each state. Working as everything from a cheesemaker in Wisconsin, a border patrol agent in Arizona, and a meatpacker in Kansas to a lobsterman in Maine, a surfing instructor in Hawaii, and a football coach in Alabama, Daniel chronicles how he adapted to the wildly differing people, cultures, and environments. From one week to the next he had no idea exactly what his duties would be, where he'd be sleeping, what he'd be eating, or how he'd be received. He became a roving news item, appearing on CNN,

Fox News, World News Tonight, MSNBC, and the Today show—which was good preparation for his stint as a television weatherman. Tackling challenge after challenge—overcoming anxiety about working four miles underground in a West Virginia coal mine, learning to walk on six-foot stilts (in a full Egyptian king costume) at a Florida amusement park, racing the clock as a pit-crew member at an Indiana racetrack—Daniel completed his journey a changed man. In this book he shares stories about the people he met, reveals the lessons he learned, and explains the five principles that kept him going.

Platforms that allow

businesses to centrally acquire and manage their logistics services disrupt an industry that has been relationship-based for centuries. The authors discuss smart contracts, which are one of the most exciting applications of Blockchain, Software as a Service (SaaS) offerings for freight procurement, where numerous data sources can be integrated and decision-making processes automated, and marine terminal operating systems as an integral node for shipments. In The Digital Transformation of Logistics: Demystifying Impacts of the Fourth Industrial Revolution, insights are shared into the cold chain industry where companies respond to increasing quality demands, and how European governments are innovatively responding to challenges of cross-border eCommerce. People are a vital element of the digital transformation and must be on board to drive change. The Digital Transformation of Logistics: Demystifying Impacts of the Fourth Industrial Revolution explains how executives can create sustainable impact and how competencies can be

managed in the digital age - especially for sales executives who require urgent upskilling to remain relevant. Best practices are shared for organizational culture change, drawing on studies among senior leaders from the US, Singapore, Thailand, and Australia, and for managing strategic alliances with logistics service providers to offset risks and create cross-functional, cross-company transparency. The Digital Transformation of Logistics: Demystifying Impacts of the Fourth Industrial Revolution provides realistic insights, a ready-to-use knowledge base, and a working vocabulary about current activities and emerging trends of the Logistics industry. Intended readers are supply chain professionals working for manufacturing, trading, and freight forwarding companies as well as students and all interested parties.

**George Washington's Journey** Packt Publishing Ltd

Bertrand Russell famously quipped that he didn't believe in God for the same reason that he didn't believe in a teapot in orbit between the earth and Mars: it is a bizarre assertion for which no evidence can be provided. Is belief in God really like belief in Russell's teapot? Kenneth L. Pearce argues that God is no teapot. God is a real answer to the deepest question of all: why is there something rather than nothing? Graham Oppy argues that we should believe that there are none but natural causal entities with none but natural causal properties—and hence should believe that there are no gods. Beginning from this basic disagreement, the authors proceed to discuss and debate a wide range of philosophical questions,

including questions about explanation, necessity, rationality, religious experience, mathematical objects, the foundations of ethics, and the methodology of philosophy. Each author first presents his own side, and then they interact through two rounds of objections and replies. Pedagogical features include standard

form arguments, section summaries, bolded key terms and principles, a glossary, and annotated reading lists. In the volume foreword, Helen De Cruz calls the debate "both edifying and a joy," and sums up what's at stake: "Here you have two carefully formulated positive proposals for worldviews that explain all that is: classical theism, or naturalistic

atheism. You can follow along with the authors and deliberate: which one do you find more plausible?" Though written with beginning students in mind, this debate will be of interest to philosophers at all levels and to anyone who values careful, rational thought about the nature of reality and our place in it.
