Atkins' Physical Chemistry: Molecular Thermodynamics and Kinetics is designed for use on the second semester of a quantum-first physical chemistry course. Based on the hugely popular Atkins' Physical Chemistry, this volume approaches molecular thermodynamics with the assumption that students will have studied quantum mechanics in

their first semester. The exceptional quality of previous editions has been built upon to make this new edition of Atkins' Physical Chemistry even more closely suited to the needs of both lecturers and students. Re-organised into discrete 'topics', the text is more flexible to teach from and more readable for students. Now in its eleventh edition, the text has been enhanced with additional learning features and maths support to demonstrate the absolute centrality of mathematics to physical chemistry. Increasing the digestibility of the text in this new approach, the reader is brought to a question, then the math is used to show how it can be answered and progress made. The expanded and redistributed maths support also includes new 'Chemist's toolkits' which

provide students with succinct reminders of mathematical concepts and techniques right where they need them. Checklists of key concepts at the end of each topic add to the extensive learning support provided throughout the book, to reinforce the main take-home messages in each section. The coupling of the broad coverage of the subject with a structure and use of pedagogy that is even more innovative will ensure Atkins' Physical Chemistry remains the textbook of choice for studying physical chemistry.

Contemporary Archaeology and the City foregrounds the archaeological study of post-industrial and other urban transformations through a diverse,

international collection of case studies. Over the past decade contemporary archaeology has emerged as a dynamic force for dissecting and contextualizing the material complexities of present-day societies. Contemporary archaeology challenges conventional anthropological and archaeological conceptions of the past by pushing temporal boundaries closer to, if not into, the present. The volume is organized around three themes that highlight the multifaceted character of urban transitions in present-day cities - creativity, ruination, and political action. The case studies offer comparative perspectives on transformative global urban processes in local contexts through research conducted in the struggling, post-industrial cities of Detroit, Belfast,

Indianapolis, Berlin, Liverpool, Belém, and post-Apartheid Cape Town, as well as the thriving urban centres of Melbourne, New York City, London, Chicago, and Istanbul. Together, the volume contributions demonstrate how the contemporary city is an urban palimpsest comprised by archaeological assemblages - of the built environment, the surface, and buried sub-surface - that are traces of the various pasts entangled with one another in the present. This volume aims to position the city as one of the most important and dynamic arenas for archaeological studies of the contemporary by presenting a range of theoretically-engaged case studies that highlight some of the major issues that the study of contemporary cities pose for

archaeologists.
