Health Insurance aims at filling a gap in actuarial literature, attempting to solve the frequent misunderstanding in regards to both the purpose and the contents of health insurance products (and 'protection products', more generally) on the one hand, and the relevant actuarial structures on the other. In order to cover the basic principles regarding health insurance techniques, the first few chapters in this book are mainly devoted to the need for health insurance and a description of insurance products in this area (sickness insurance, accident insurance, critical illness covers, income protection, long-term care insurance, health-related benefits as riders to life insurance policies). An introduction to general actuarial and risk-management issues follows. Basic actuarial models are presented for sickness insurance and income protection (i.e. disability annuities). Several numerical examples help the reader understand the main features of pricing and reserving in the health insurance area. A short introduction to actuarial models for long-term care insurance products is also provided. Advanced undergraduate and graduate students in actuarial sciences; graduate students in

economics, business and finance; and professionals and technicians operating in insurance and pension areas will find this book of benefit.

**EBOOK: Principles and Practice of Marketing, 9e** McGraw Hill

This book provides an authoritative insight on the Loss and Damage discourse by highlighting state-of-the-art research and policy linked to this discourse and articulating its multiple concepts, principles and methods. Written by leading researchers and practitioners, it identifies practical and evidence-based policy options to inform the discourse and climate negotiations. With climate-related risks on the rise and impacts being felt around the globe has come the recognition that climate mitigation and adaptation may not be enough to manage the effects from anthropogenic climate change. This recognition led to the creation of the Warsaw International Mechanism on Loss and Damage in 2013, a climate policy mechanism dedicated to dealing with climate-related effects in highly vulnerable countries that face severe constraints and limits to adaptation. Endorsed in 2015 by the Paris Agreement and effectively considered a third pillar of international climate policy, debate and research on Loss and Damage continues to gain enormous traction. Yet, concepts, methods and tools as well as directions for policy and implementation have remained contested and vague. Suitable for researchers, policy-advisors, practitioners and the interested public, the book furthermore: • discusses the political, legal, economic and institutional dimensions of the issue • highlights normative questions central to the discourse • provides a focus on climate risks and climate risk management. • presents salient case studies from around the world.

Principles of Insurance Law Financial Times/Prentice Hall

The Law of Compulsory Motor Vehicle Insurance covers motor vehicle compulsory liability insurance in a broad context by putting emphasis on the fundamental principles unique to this

type of insurance, their operation together with the general principles of law, and the interventions of the relevant EU Directives and CJEU decisions. The law regarding motor vehicle liability insurance is ever-evolving, fast-developing and offering more intellectual challenges as the disputes vary every day. This book examines the principles applicable in this area of law by studying the grounds where the rules derive from and their continuing developments over decades at both domestic and EU levels. Whilst doing so it also discusses whether the sources of the current applicable law, in several different motor vehicle compulsory insurance related issues, are in line with each other. The book also presents careful analyses of the interplay between the different sources of law, detailed discussions on what the law should be in order to provide consistency amongst the rules and principles identified, and how solutions to newly emerging issues can be found. The regime applicable in this area is overcomplex. This book will be valuable reading for any lawyer, whether academic, practitioner or student who would like to understand the insurance cover required for compulsory motor vehicle third party liability insurance together with the rationale for adopting

such rules and their interpretation by the Courts.
