Learning a new discipline is similar to learning a new language; in order to master the foundation of architecture, you must first master the basic building blocks of its language - the definitions, function, and usage. Language of Architecture provides students and professional architects with the basic elements of architectural design, divided into twenty-six easy-to-comprehend chapters. This visual reference includes an introductory, historical view of the elements, as well as an overview of how these elements can and have been used across multiple design disciplines.

Whether you're new to the field or have been an architect for years, you'll want to flip through the pages of this book throughout your career and use it as the go-to reference for inspiration, ideas, and reminders of how a strong knowledge of the basics allows for meaningful, memorable, and beautiful fashions that extend beyond trends. This comprehensive learning tool is the one book you'll want as a staple in your library.

Experiencing Architecture, second edition Bloomsbury Publishing

"The Place of Silence explores the poetics and politics of silence in architecture. Bringing together contributions by internationally recognized scholars in architecture and the humanities, it explores the diverse practices, affects, politics and cultural meanings of silence, silent places and silent buildings in historical and contemporary contexts. What counts as silence in specific situations is highly relative, and the term itself carries complex and varied significations which make it a revealing field of study. Chapters explore a range of themes, from the apparent 'loss of silence' in the contemporary urban world; through designed silent spaces; to the forced silences of oppression, catastrophe, or technological breakdown. The book unfolds a rich and complementary array of perspectives which address - through the lens of architecture and place - questions of sound, atmosphere, and attunement, together building a volume which will form the key scholarly resource on architecture and silence"--

Architecture Design Notebook Taylor & Francis

Architecture Design Notebook focuses on the process of design as pragmatic and non-theoretical. Dealing systematically with the core design curriculum, it clearly demonstrates the skills required for designing at undergraduate level. Providing students with fundamental maxims of design, and a

framework within which they can approach their work, this book supports undergraduates as they learn to produce solutions to design challenges. This vital design companion underpins the cornerstone of an architectural undergraduates' studies - studio design projects. With over 100 sketches included, the book inspires student's design ideas. This updated edition includes new sections on green architecture, urban space typology, and the virtual building. A. Peter Fawcett is an architect and critic who combines teaching with sporadic practice; he is currently Professor Emeritus of Architecture at the University of Nottingham and visiting Professor at the University of Lincoln. In recent years his work has been placed in architectural competitions and has been hung at the Royal Academy and Royal Ulster Academy.

First published in 1996, *The Eyes of the Skin* has become a classic of architectural theory. It asks the far-reaching question why, when there are five senses, has one single sense - sight - become so predominant in architectural culture and design? With the ascendancy of the digital and the all-pervasive use of the image electronically, it is a subject that has become all the more pressing and topical since the first edition's publication in the mid-1990s. Juhani Pallasmaa argues that the suppression of the other four sensory realms has led to the overall impoverishment of our built environment, often diminishing the emphasis on the spatial experience of a building and architecture's ability to inspire, engage and be wholly life enhancing. For every student studying Pallasmaa's classic text for the first time, *The Eyes of the Skin* is a revelation. It compellingly provides a totally fresh insight into architectural culture. This third edition meets readers' desire for a further understanding of the context of Pallasmaa's thinking by providing a new essay by architectural author and educator Peter MacKeith. This text combines both a biographical portrait of Pallasmaa and an outline of his architectural thinking, its origins and its relationship to the wider context of Nordic and European thought, past and present. The focus of the essay is on the fundamental humanity, insight and sensitivity of Pallasmaa's approach to architecture, bringing him closer to the reader. This is illustrated by Pallasmaa's sketches and photographs of his own work. The new edition also provides a foreword by the internationally renowned architect Steven Holl and a revised introduction by Pallasmaa himself.

From the mid-1960s onwards Michel Foucault has had a significant impact on diverse aspects of culture, knowledge and arts including architecture and its critical discourse. The implications for

architecture have been wide-ranging. His archaeological and genealogical approaches to knowledge have transformed architectural history and theory, while his attitude to arts and aesthetics led to a renewed focus on the avant-garde. Prepared by an architect, this book offers an excellent entry point into the remarkable work of Michel Foucault, and provides a focused introduction suitable for architects, urban designers, and students of architecture. Foucault's crucial juxtaposition of space, knowledge and power has unlocked novel spatial possibilities for thinking about design in architecture and urbanism. While the philosopher's ultimate attention on the issues of body and sexuality has defined our understanding of the possibilities and limits of human condition and its relation to architecture. The book concentrates on a number of historical and theoretical issues often addressed by Foucault that have been grouped under the themes of archaeology, enclosure, bodies, spatiality and aesthetics in order to examine and demonstrate their relevancy for architectural knowledge, its history and its practice.

Bringing Graham Harman's philosophy into direct confrontation with contemporary architectural theory in new and creative ways, *Is There an Object-Oriented Architecture?* provides a dialogue between Harman and six of the world's leading architectural thinkers, Adam Sharr, Lorens Holm, Jonathan Hale, Peg Rawes, Patrick Lynch and Peter Carl. Harman's object-oriented philosophy is one that sees the universe as a carnival of equal "objects" with no hierarchy between humans and nonhumans. In his model, unicorns, triangles, bicycles, neutrons, and humans are all things with enduring essences that outlast their partial transformations. It is a strikingly democratic vision of the universe that knocks humans off their ontological pedestal as arbiters of what is real. It also radically challenges the very precepts of architectural theory, the structure of which remains stubbornly human-centric as it seeks to give form to the human being's place at the centre of the cosmos. In this new book, each thinker develops the implications of Harman's philosophy for the future of architecture by entering into a direct exchange with the philosopher and his thinking, both questioning him and questioning with him.

This book brings architecture and urbanism into dialogue with phenomenology. The contributors are architects and scholars of urbanism with backgrounds in literature, history, religious studies, and art history. Rather than developing a single theoretical statement, the book addresses architecture's relationship with the city in a wide range of historical and contemporary contexts. The chapters trace hidden genealogies, and explore the ruptures as much as the persistence of recurrent cultural motifs. Together, these interconnected phenomenologies of the city raise simple but fundamental questions: What is the city for, how is it ordered, and how can it be understood?

What should our buildings look like? Or is their usability more important than their appearance? Paul Guyer argues that the fundamental goals of architecture first identified by the Roman architect Marcus Pollio Vitruvius - good construction, functionality, and aesthetic appeal - have remained valid despite constant changes in human activities, building materials and technologies, as well as in artistic styles and cultures. Guyer discusses philosophers and architects throughout history, including Alberti, Kant, Ruskin, Wright, and Loos, and surveys the ways in which their ideas are brought to life in buildings across the world. He also considers the works and words of contemporary architects including Annabelle Selldorf, Herzog and de Meuron, and Steven Holl, and shows that - despite changing times and fashions - good architecture continues to be something worth striving for. This new series offers short and personal perspectives by expert thinkers on topics that we all encounter in our everyday lives.

Ten Books on Architecture Vitruvius your hands, my devotion continuing unchanged as I remembered him inclined me to support you. And so with Marcus Aurelius, Publius Minidius, and Gnaeus Cornelius, I was ready to supply and repair ballistae, scorpiones, and other artillery, and I have received rewards for good service with them. After your first bestowal of these upon me, you continued to renew them on the recommendation of your sister. 3. Owing to this favour I need have no fear of want to the end of my life, and being thus laid under obligation I began to write this work for you, because I saw that you have built and are now building extensively, and that in future also you will take care that our public and private buildings shall be worthy to go down to posterity by the side of your other splendid achievements. I have drawn up definite rules to enable you, by observing them, to have personal knowledge of the quality both of existing buildings and of those which are yet to be constructed. The Philosophy of Sustainable Design Routledge

The chief focus of the book is on the symbolic and linguistic. The purpose is to develop an integrated theory of architectural description and architectural intention (and this includes the intention of the

user as well as that of the designer), insofar as architecture is an art. Norberg-Schulz is a practicing architect; his buildings stand in several countries; and he elucidates the nature of architectural reality with a practiced eye and from a practical viewpoint. Although the methods and theory that his book develops are uncompromisingly rigorous and tightly formed, they are everywhere related to actual building, through specific examples and through the use of over 100 photographs. The structure that Norberg-Schulz has fashioned is surely one of the most impressive intellectual edifices that any architect has ever produced. The materials that are organically worked into it include Gestalt psychology, the mechanics of perception, information theory, modern analytic philosophy, and in particular, linguistic analysis, and the general theory of signs and symbols. The result, however, is not an eclectic hodge-podge; all these materials have their place and purpose; none is applied extraneously for "show" or purely decorative effect. And all this divergent material had to be joined according to plan within formal bounds in order to produce a theory with equally divergent applications: one that can treat not only of the aesthetics of architecture but equally well of its social, psychological, and cultural effects. The chief focus of the book is on the symbolic and linguistic. The purpose is to develop an integrated theory of architectural description and architectural intention (and this includes the intention of the user as well as that of the designer), insofar as architecture is an art.

A classic examination of superb design through the centuries. Widely regarded as a classic in the field, *Experiencing Architecture* explores the history and promise of good design. Generously illustrated with historical examples of designing excellence—ranging from teacups, riding boots, and golf balls to the villas of Palladio and the fish-feeding pavilion of Beijing's Winter Palace—Rasmussen's accessible guide invites us to appreciate architecture not only as a profession, but as an art that shapes everyday experience. In the past, Rasmussen argues, architecture was not just an individual pursuit, but a community undertaking. Dwellings were built with a natural feeling for place, materials and use, resulting in "a remarkably suitable comeliness." While we cannot return to a former age, Rasmussen notes, we can still design spaces that are beautiful and useful by seeking to understand architecture as an art form that must be experienced. An understanding of good design comes not only from one's professional experience of architecture as an abstract, individual pursuit, but also from one's shared, everyday experience of architecture in real time—its particular use of light, color, shape, scale, texture, rhythm and sound. *Experiencing Architecture* reminds us of what good architectural design has accomplished over time, what it can accomplish still, and why it is worth pursuing. Wide-ranging and approachable, it is for anyone who has ever wondered "what instrument the architect plays on."

Bringing together the reflections of an architectural theorist and a philosopher, this book encourages philosophers and architects, scholars and designers alike, to reconsider what they do as well as what they can do in the face of challenging times. It does so by exploring the notion that architecture and design can (and possibly should), in their own right, make for a distinctive form of ethical investigation. The book is less concerned with absolutist understandings of the two components of ethics, a theory of 'the good' and a theory of 'the right', than with remaining open to multiple

relations between ideas about the built environment, design practices and the plurality of kinds of human subjects (inhabitants, individuals and communities) accommodated by buildings and urban spaces. The built environment contributes to the inculcation of all sorts of values (good and bad). Thus, this book aims to change the way people commonly think about ethics, not only in relation to the built environment, but to themselves, their ways of thinking and modes of behaviour.

Philosophy for Architects is an engaging and easy-to-grasp introduction to philosophical questions of interest to students of architectural theory. Topics include Aristotle's theories of "visual imagination" and their relevance to digital design, the problem of optical correction as explored by Plato, Hegel's theory of zeitgeist, and Kant's examinations of space and aesthetics, among others. Focusing primarily on nineteenth- and twentieth-century philosophy, it provides students with a wider perspective concerning philosophical problems that come up in contemporary architectural debates.

The Philosophy of Design is an introduction to the fundamental philosophical issues raised by the contemporary practice of design. The first book to systematically examine design from the perspective of contemporary philosophy, it offers a broad perspective, ranging across key philosophical areas such as aesthetics, epistemology, metaphysics and ethics. The first part of the book explores central issues about the nature of design and its products, and the rationality of design methods. A central theme is that Modernist ideas, such as those offered by Loos and Gropius, provide important responses to these philosophical issues. In the second part of the book, these Modernist ideas serve as touchstones in the exploration of key issues for design, including: the place of aesthetics in design; design's relation to personal expression; the meaning of function; and design's relation to consumerism. The social responsibility of designers, and the impact of design practice on ethical reasoning are also discussed. Written in an accessible style, *The Philosophy of Design* presents a new perspective on design and a provocative reassessment of the Modernist legacy. It will engage students and designers with current philosophical debates, helping them to bring into clearer focus the meaning of contemporary design, and its unique challenges and possibilities.

The Ethical Function of Architecture Ashgate Publishing, Ltd.

Architectural Philosophy is the first book to outline a philosophical account of architecture and to establish the singularity of architectural practice and theory. This dazzling sequence of essays opens out the subject of architecture, touching on issues as wide ranging as the problem of memory and the dystopias of science fiction. Arguing for the indissolubility of form and function, *Architectural Philosophy* explores both the definition of the site and the possibility of alterity. The analysis of the nature of the present and the complex structure of repetition allows for the possibility of judgement, a judgement that arises from a reworked politics of architecture.

A book that pulls together the results of research by several scholars to provide a fresh look at the rich heritage of ideas that Wright contributed to the theory and practice of architecture, with special emphasis on the ordering of structuring of architectural experience. An attempt is made to convey an understanding of Wright's contributions through a direct analysis of his designs as they exist or

existed in reality. The authors take a different look at Wright's work in a search for clarity and understanding.

Michael Benedikt teaches, practices architecture, and writes in Austin, where he is a Professor of Architecture at the University of Texas. His second book, *Deconstructing the Kimbell* (0-930829-16-6), is also published by Lumen. "Benedikt has written a bold theoretical essay, with stirring cultural implications, that argues to restore the missing sense of reality to architecture and insists on 'the direct esthetic experience of the real.' . . . a timely manifesto. Thought-provoking and eminently quotable, it succeeds admirably in what it sets out to do: to recall architecture, and not only architecture, to those all but mute meanings so often passed over and yet inseparable from our everyday existence.--Karsten Harries "This book will still be useful when this year's round arches have all been remodeled (isn't it inevitable?) into pointed. And because it is so vividly -and thoughtfully--written, it will still be a pleasure to read."--Charles Moore "Every literate architect should take an afternoon off to read and ponder this brief and thoughtful and thoroughly engaging book. . . . Benedikt says more about some central aesthetic and philosophical issues confronting contemporary architecture than many celebrated pundits manage to squeeze into a shelfful of

books. . . . He offers a straightforward account of his own struggle to understand the pleasures and responsibilities of architecture in an age when aesthetic pleasure is all but indiscernible from entertainment, and responsibility is often a cover for thoughtless conformity."--Roger Kimball, *Architectural Record* "Benedikt marches bravely into the philosophical thicket to find a working definition of reality. . . . In his sensibilities, he is quite transcendental, much like a Thoreau or an Emerson in a hotel lobby of potted ficus trees."--Howard Mansfield, *Small Press* ". . . the book of the decade in Texas architectural circles. . . ."--Texas Architect

Architecture Theory is a comprehensive and groundbreaking one volume overview of, and introduction to, contemporary critical discourse in architecture. In bringing critical theory and Continental philosophy to bear upon architecture, it provides a solid framework for a fully up-to-date theory of architecture, one that reflects the latest developments and concerns. The book is divided into four sections—groundwork; constructing the "individual"; pluralities; instrumentality—each covering a core theme in contemporary architecture theory. In each section an introductory essay by Andrew Ballantyne provides valuable context, exposition, and analysis. This is followed by a selection of writings on architecture and other related cultural concerns from major contemporary thinkers, including Zvizvek, Irigaray, Lefebvre, Lyotard, Kristeva, Nancy, Virilio, Deleuze, and Negri.
