Using ergonomics in forensics can help prevent the recurrence of system failures through engineering or administrative controls. It can also raise the level of concern among professionals and the public regarding product, workplace, and service safety due to perceived exposure to liability. Even with such a potentially important and broad impact, f

The notion of Minimalism is proposed as a theoretical tool supporting a more differentiated understanding of reduction and thus forms a standpoint that allows definition of aspects of simplicity. Possible uses of the notion of minimalism in the field of human-computer interaction design are examined both from a theoretical and empirical viewpoint, giving a range of results. Minimalism defines a radical and potentially useful perspective for design analysis. The empirical examples show that it has also proven to be a useful tool for generating and modifying concrete design techniques. Divided into four parts this book traces the development of minimalism, defines the four types of minimalism in interaction design, looks at how to apply it and finishes with some conclusions.

Information Systems Development (ISD) progresses rapidly, continually creating new challenges for the professionals involved. New concepts, approaches and techniques of systems development emerge constantly in this field. Progress in ISD comes from research as well as from practice. This conference will discuss issues pertaining to information systems development (ISD) in the inter-networked digital economy. Participants will include researchers, both experienced and novice, from industry and academia, as well as students and practitioners. Themes will include methods and approaches for ISD; ISD education; philosophical, ethical, and sociological aspects of ISD; as well as specialized tracks such as: distributed software development, ISD and knowledge management, ISD and electronic business / electronic government, ISD in public sector organizations, IOS. Welcome to the proceedings of ICCHP 2008. We were proud to welcome participants from more than 40 countries from all continents to ICCHP. The International Programme Committee, encompassing 102 experts from all over the world, selected 150 full and 40 short papers out of 360 abstracts submitted to ICCHP. Our acceptance rate of about half of the submissions, demonstrates the scientific quality of the programme and in particular the proceedings you have in your hands. An impressive group of experts agreed to organize "Special Thematic Sessions" (STS) for ICCHP 2008. The existence of these STS sessions helped to bring the meeting into sharper focus in several key areas of assistive technology. In turn, this deeper level of focus helped to bring together the state-of-the-art and mainstream technical, social, cultural and political developments. Our keynote speaker, Jim Fruchterman from BeneTech, USA highlighted the importance of giving access to ICT and AT at a global level. In another keynote by Harold Thimbleby, Swansea University, UK, the role of user-centred design and usability engineering in assistive technology and accessibility was addressed. And finally, a combination keynote and panel discussion was reserved for WAI/WCAG2.0, which we expect to be the new reference point for Web accessibility from the summer of 2008 and beyond.

This book presents a collection of recent and extended academic works in selected topics of biomedical signal processing, bio-imaging and biomedical ethics and legislation. This wide range of topics provide a valuable update to researchers in the multidisciplinary area of biomedical engineering and an interesting introduction for engineers new to the area. The techniques covered include modelling, experimentation and discussion with the application areas ranging from acoustics to oncology, health education and cardiovascular disease.

The previous edition of the International Encyclopedia of Ergonomics and Human Factors made history as the first unified source of reliable information drawn from many realms of science and technology and created specifically with ergonomics professionals in mind. It was also a winner of the Best Reference Award 2002 from the Engineering Libraries Division, American Society of Engineering Education, USA, and the Outstanding Academic Title 2002 from Choice Magazine. Not content to rest on his laurels, human factors and ergonomics expert Professor Waldemar Karwowski has overhauled his standard-setting resource, incorporating coverage of tried and true methods, fundamental principles, and major paradigm shifts in philosophy, thought, and design. Demonstrating the truly interdisciplinary nature of this field, these changes make the second edition even more comprehensive, more informative, more, in a word, encyclopedic. Keeping the format popularized by the first edition, the new edition has been completely revised and updated. Divided into 13 sections and organized alphabetically within each section, the entries provide a clear and simple outline of the topics as well as precise and practical information. The book reviews applications, tools, and innovative concepts related to ergonomic research. Technical terms are defined (where possible) within entries as well as in a glossary. Students and professionals will find this format invaluable, whether they have ergonomics, engineering, computing, or psychology backgrounds. Experts and researchers will also find it an excellent source of information on areas beyond the range of their direct interests.

Loaded with information on the design of work systems, workplaces, and workstations as well as human anthropometrics, *Ergonomics for Beginners: A Quick Reference Guide, Third Edition* provides a useful quick reference and valuable tool for novices and experienced professionals alike. Retaining the features that made each previous edition a bestseller, the authors have meticulously revised the information to address rapid developments in information and communications technology, offering ergonomics advice on topics such as wireless, remote, and hands-free controls, website design, mobile interaction, and virtual offices. Understand the Utility and Limitations of Modern Technology In their trademark, eloquent style, the authors

explain the application of a human-centered approach to the design, testing, and evaluation of work systems by considering the interrelated set of physical, cognitive, social, organizational, and other relevant human factors. Their elemental, but comprehensive, treatment of the subject matter provides an authoritative and archival reference of basic theoretical and practical knowledge that will help enhance human performance and reduce the undesirable effects and unintended consequences of many human interactions with technology and the organizational environment. Small enough to carry along to work sites, with simple and clear illustrations, the book examines how to improve performance and reduce the undesirable effects and unintended consequences of many human interactions with technology and the work environment.

Scientists and engineers from industry, academia, and major research institutes from 19 countries contributed to the Vienna Conference on Human Computer Interaction (VHCI '93). This volume contains the proceedings of the conference. Only submissions of the highest scientific quality were accepted as papers, and all contributions address the latest research and application in the human aspects of design and use of computing systems. The papers cover a large field of human computer interaction including design, evaluation, interactive architectures, cognitive models, workplace environment, and HCI application areas. The motto of the conference, Fin de Si cle, affiliates Vienna's intellectual tradition to the field's progressive development at the end of this century. The VHCI is focused on showing that HCI is more than an area to beautify interaction with computers, provokes disputes among its different contributing fields, does not flee the vital questions for people using computers, and provides radically new opportunities for users.

Welcome to the proceedings of the 6th EuroHaptics 2008 conference held in Madrid, June 10-13, 2008 under the auspices of the Universidad Politécnica de Madrid. EuroHaptics conferences have been held in Europe, initially annually, now on a biennial basis, since the first one at the University of Birmingham in 2001. The promotion of the European haptics community by the Eurohaptics Society (www.eurohaptics.org) integrates a multidisciplinary group of researchers with a wide range of interests stemming from backgrounds in technical, scientific, educational and artistic disciplines. The regular congregation of individuals around the topic of haptics has led to many fruitful and successful interactions that have

developed across the EuroHaptics conferences. Moreover, this community now enjoys links to researchers around the rest of the world through the WorldHaptics conference series, of which EuroHaptics is proud to be a sponsoring partner. Such links offer increased possibilities for collaboration which can only bring us greater successes in our endeavours to understand the nature of haptics. June 2008 Alan Wing President of EuroHaptics Society IEEE Technical Committee on Haptics (TCH) <http://www.worldhaptics.org/> The IEEE Technical Committee on Haptics (TCH) is co-sponsored by the IEEE Robotics & Automation Society and the IEEE Computer Society. The mission of the TCH is to integrate the diverse interests of the highly interdisciplinary haptics community and to improve communication among the different research areas.

Have all basic functions of ISO 9241 been defined? How do you use ISO 9241 data and information to support organizational decision making and innovation? What are your current levels and trends in key measures or indicators of ISO 9241 product and process performance that are important to and directly serve your customers? how do these results compare with the performance of your competitors and other organizations with similar offerings? Who sets the ISO 9241 standards? A compounding model resolution with available relevant data can often provide insight towards a solution methodology; which ISO 9241 models, tools and techniques are necessary? Defining, designing, creating, and implementing a process to solve a challenge or meet an objective is the most valuable role... In EVERY group, company, organization and department. Unless you are talking a one-time, single-use project, there should be a process. Whether that process is managed and implemented by humans, AI, or a combination of the two, it needs to be designed by someone with a complex enough perspective to ask the right questions. Someone capable of asking the right questions and step back and say, 'What are we really trying to accomplish here? And is there a different way to look at it?' This Self-Assessment empowers people to do just that - whether their title is entrepreneur, manager, consultant, (Vice-)President, CxO etc... - they are the people who rule the future. They are the person who asks the right questions to make ISO 9241 investments work better. This ISO 9241 All-Inclusive Self-Assessment enables You to be that person. All the tools you need to an in-depth ISO 9241 Self-Assessment. Featuring new and updated case-based questions, organized into seven core areas of process design, this Self-Assessment will help you identify areas in which ISO 9241 improvements can be made. In using the questions you will be better able to: - diagnose ISO 9241 projects, initiatives, organizations, businesses and processes using accepted diagnostic standards and practices - implement evidence-based best practice strategies aligned with overall goals - integrate recent advances in ISO 9241 and process design strategies into practice according to best practice guidelines Using a Self-Assessment tool known as the ISO 9241 Scorecard, you will develop a clear picture of which ISO 9241 areas need attention. Das Internet hat sich in einigen Branchen als wichtiger Vertriebskanal etabliert und stellt somit ein nicht zu vernachlässigenden Anteil am Umsatz dar. Der Kunde möchte die vereinfachten Entscheidungsprozesse durch das Internet nutzen, um sein gewünschtes Ziel schneller und effektiver zu erreichen. An dieser Stelle wird die Gebrauchstauglichkeit von Websites immer wichtiger. Wenn der Besucher sein gewünschtes Ziel innerhalb kürzester Zeit nicht erreicht, bricht er den Surfvorgang ab. Selbst bei Websites, die nicht als Vertriebskanal konzipiert sind, kann das den Unmut des Kunden auf das Unternehmen ziehen. Deshalb besteht die Zielsetzung dieser Arbeit primär darin zu beurteilen, ob die Website der Firma MAFI Transport-Systeme GmbH den Anforderungen der DIN EN ISO 9241 entspricht und aktuellen Richtlinien der Usability standhalten kann. Dabei stehen Teil 11 und 110 der Norm im Mittelpunkt. Ergänzend werden Untersuchungen aus der Fachliteratur von Usability Experten herangezogen, da die verwendete DIN sehr allgemein formuliert ist. Diese Norm wurde ursprünglich für Software entwickelt und ist nicht vollständig auf Websites übertragbar. In den folgenden Kapiteln wird erst die Gebrauchstauglichkeit bzw. Usability definiert und auf ihre Entstehung eingegangen. Anschließend werden verschiedene Methoden der Evaluation von Usability beschrieben. In Kapitel 4 werden die Gemeinsamkeiten der Ergonomie für Software und Websites erläutert und spezielle ergonomische Anforderung für Internetauftritte herausgearbeitet. Kapitel 5 beschreibt DIN EN ISO 9241 näher. Im praktischen Teil der Arbeit, welcher mit Kapitel 6 beginnt, wird die Website mit der ISO Norm bzw. ergonomische Anforderungen an Websites untersucht und abschließend mit einem "Scoring-Modell" bewertet. In dieser Arbeit wird nur am Rande auf die Programmierung bzw. die technische Realisierung von Websites eingegangen. Außerdem ist in der Fachliteratur oft die psychologische Wahrnehmung ein ausführlich behandeltes Thema
